

David Davieson

Product Engineer | Agentic Systems | Customer Success & FinTech

daviddavieson@gmail.com | +1 (832) 670-8589 | nuroctane.xyz | github.com/nuroctane | linkedin.com/in/david-davieson

SUMMARY

Product engineer and technical operator who ships agentic systems, local AI infrastructure, 3D web products, native mobile apps, and institutional integrations. Built Rust, TypeScript, and Python products across 60+ model providers, local inference, real-time orbital visualization, privacy-first OCR, and manufacturing-oriented configuration. Brings customer success ownership across \$1B+ AUM, \$1.2M+ ARR retention, \$1.7M+ capital deployment, and technical support leadership.

CORE CAPABILITIES

Languages: TypeScript/JavaScript, Python, Rust, Swift, Kotlin, Solidity, SQL

Agentic & Local AI: Multi-provider model APIs, tool calling, subagents, plugins, skills, permission systems, Ollama, llama-server, GGUF routing, ONNX Runtime

Product & Web: React, Next.js, Vite, Three.js, GSAP, Tailwind CSS, design systems, responsive and accessible UI

Mobile: SwiftUI, Jetpack Compose, Capacitor, AVFoundation, Media3, Core Data, Room, Hilt

Backend & Delivery: Node.js, Express, Python, REST, Vercel, Upstash Redis, Firebase, pnpm monorepos, GitHub Actions

Cloud & Operations: AWS EC2/S3/Lambda/VPC/Athena, Docker, Kubernetes operations, Grafana, Prometheus, Postman

FinTech & Blockchain: Commercial credit, EVM, wagmi/viem, RainbowKit, SIWE, RPC nodes, MPC wallets, DeFi/CeFi operations

Customer Systems: Technical discovery, enterprise onboarding, lifecycle ownership, KPI/SLO reporting, CRM analytics, Salesforce, Jira, Confluence

SELECTED PROJECTS

NurCLI — Multi-provider terminal coding agent | nuroctane.xyz/cli | github.com/nuroctane/nur-cli

- Built a Rust coding agent spanning 60+ providers with a streaming TUI, tool loop, subagents, todos, auto-compaction, session resume, native vision, and manual/plan/auto permission modes.
- Designed the plugin and natural-language skill system, hardened command sandbox, one-command provisioning, and knowledge integrations across Graphify, PLUR, Ruflo, and Executor.

Orbit Veil — Real-time 3D satellite intelligence | nuroctane.xyz/orbit

- Built a real-time 3D Earth and satellite tracker using CelesTrak TLE sets and local SGP4 propagation for continuous positions, orbital paths, and coverage footprints.
- Shipped search, constellation filtering, two-hour data refreshes, and time controls for replaying or accelerating the orbital scene.

nuroctane.xyz / Digital Sea — Immersive 3D portfolio platform | nuroctane.xyz

- Engineered a React, Vite, and Three.js portfolio with scroll-directed 3D navigation, dynamic social/project nodes, responsive performance tiers, and standalone product routes.
- Delivered a pnpm TypeScript monorepo with shared API clients and schemas, Vercel serverless endpoints, Redis-backed features, analytics, and automated smoke checks.

MODKEYS — 3D keyboard product configurator | nuroctane.xyz/modkeys | github.com/nuroctane/nuroctane-xyz-Site

- Built a React/Vite configurator for mechanical keyboard plates and keycaps with exact geometry, undo/redo, shareable URL-encoded builds, and dual mobile/desktop shells.
- Connected Express/Vercel and Upstash Redis services and shipped KLE JSON, SVG manufacturing-template, specification-sheet, and PDF export workflows.

SnipOCR — Private cross-platform screenshot OCR | github.com/nuroctane/snipocr

- Built Windows and macOS tray utilities that watch screenshot folders and the clipboard, run OCR fully on-device, and return editable text without uploading capture content.
- Unified Windows.Media.Ocr, Apple Vision, RapidOCR, and ONNX Runtime behind a shared multi-engine workflow with optional hardware acceleration.

hermes-local-models — Local multi-model AI router | github.com/nuroctane/hermes-local-models

- Built an OpenAI-compatible local router over GGUF model inventories so Hermes and other agent CLIs can use local weights as a primary path with configurable cloud fallback.
- Automated cross-platform discovery, llama-server presets, model selection, and fallback routing to reduce paid inference while preserving workflow continuity.

PROFESSIONAL EXPERIENCE

Bank OZK | B2B Loan Advisor | 2025–Present

- Orchestrate end-to-end commercial financing for SMEs across working-capital, private-credit-aligned, and growth facilities.
- Facilitated \$1.7M+ in capital deployment by matching borrower profiles to underwriting criteria and driving discovery through term-fit handoff.
- Use CRM analytics to tailor facility strategies and sustain pipeline velocity without sacrificing underwriting quality.

Charter Communications | Customer Solutions | May 2025–Sep 2025

- Delivered sales and retention solutions for commercial and residential connected services at top-tier performance levels.
- Built a churn-reduction framework that defended \$1.2M+ ARR and increased customer LTV approximately 25% through CRM risk signals and proactive dispatch upgrades.

Blockdaemon | Customer Success Manager | Feb 2023–May 2025

- Owned the lifecycle for \$1B+ AUM institutional clients using high-availability blockchain node services and MPC wallets.
- Established Grafana and Amazon Athena KPI cadences and drove MTTR below 24 hours on supported flows.
- Co-led feature rollouts and product launches by reviewing pull requests, deploying previews, and translating client needs across sales, compliance, product, and engineering.
- Diagnosed critical API discrepancies in Postman and delivered engineering-ready reproductions that prevented deployment delays.

Apple | Technical Support Lead | 2022–2023

- Mentored 10–15 specialists to exceed 70% NPS and 85% CSAT while reporting performance trends to senior management.
- Owned escalations, coaching loops, and privacy and device-management standards across high-volume technical support.

Coinbase | Technical Support Lead | 2022

- Led technical support protocols for teams of 5–7 across DeFi/CeFi operations, rollups, yield farming, and smart-contract interactions.
- Implemented client OpSec practices spanning hardware wallets, TOTP, and encrypted backups for high-volume institutional-adjacent workflows.

COMMERCIAL & OPERATIONAL IMPACT

- \$1B+ AUM institutional customer lifecycle ownership
- \$1.7M+ SME capital deployment
- \$1.2M+ ARR defended through retention systems
- Approximately 25% customer LTV improvement
- MTTR below 24 hours on supported infrastructure flows
- 70%+ NPS and 85%+ CSAT team performance

LEADERSHIP

ATX Tunerz Society | Vice President — Help lead an Austin automotive community and its digital presence at tunerzsociety.site.

EDUCATION

- University of North Texas — BA, Communications, 2021; Student Council; Cross-Examination Debate
- Houston Community College — AS, Computer Science; EPA Universal Technician (TX), Cert. 102116565

LANGUAGES

English (native); Spanish (advanced writing, intermediate speaking)
